

Cycle Unfulfilled: Missed opportunity

Walking one meter further to the paper recycling bin is a small act but would still have a massive impact in saving our earth. Did you know that 40% of landfill waste is paper? Everyone has their own responsibility when it comes to saving the planet, why put a bag full of paper in the trash section, when the paper recycling section is only one meter away. Pick environmental responsibility over convenience! By recycling paper, you are reducing greenhouse gas emissions that contribute to climate change by avoiding methane emissions and reducing energy for a number of paper products.
