

# FUTURE FISH FOREVER

By Sophia Alice Larsson and Mathilde Rey Puvilland

We made a plastic fish, using garbage we found in Lund. This helps us demonstrate how dire the situation is.

What situation, you might ask? You might have never thought how much trash goes into the ocean. We collected all this trash in 30 minutes. If we never picked it up, it could've ended up in a fish's mouth. By 2050, there will be more plastic than fish in the ocean! If we don't change things now, fish in the future will look like this, forever. So, avoid plastic bags, packaging, and get your own containers. If you want to change our future, then change your actions!
