

Photo - Hotel for bees and pollinators!

Photographer: Pehter Abrahamsson (Kiras dad)

Do you know why we build and set up insect hotels? We do it to give bees and other pollinators a place to spend the winter or live. The different compartments can be home to different kinds of insects. If insects don't have a place to live, it can affect the insect populations and maybe people's food supply. The bee population has declined significantly in recent years, so it is especially important now. By building insect hotels, we help bees and other insects, which is important for the earth's ecosystem, and thereby contribute to achieving global goal number 15.
